

NEW PRESSURE GAUGES FOR REGULATORS & PILOTS

Liquid-Filled Pressure Guages Now Standard

This product notice is to inform you that Kimray has made the decision to fulfill a longstanding request to upgrade our standard gauges for all pressure regulators and pilots to a liquid-filled model. This upgrade will provide customers a better quality, longer-lasting gauge.

You asked, and we answered. Goodbye dry gauges; Hello, Flex Window!

In an effort to exceed industry expectations, we have selected a robust liquid-filled gauge that offers exciting new technology—the Flex Window gauge. We believe this will further eliminate the potential headaches that can come with a pressure gauge, giving users confidence and peace of mind.

The pricing for pressure regulators and pilots will receive a nominal increase accordingly. We believe the value added in improved performance will be well worth it for our customers.

To get updated pricing information, contact your local Kimray store or authorized distributor.

This change is scheduled to go into effect on March 1st, 2021. Look for more information on these new gauges in the coming months!
