

## NON-VENT CONVERSION KITS AVAILABLE FOR BACK PRESSURE REGULATORS

This product notice is to inform you that we now offer kits for customers who want to convert their venting back pressure regulators to non-venting.

When a back pressure regulator is operating correctly, it intermittently vents pressure off the diaphragm as it adjusts. The non-vent versions allow the vented pressure to be redirected downstream, rather than venting to atmosphere.

To make the conversion process as simple as possible, we now offer kits that include the necessary spring, fittings, and tubing needed to make the change to non-venting.

Check the chart below to identify the kit you need for your valve.

*Tubing*

*Elbow*

*Connector*

*Spring*

*Tee*

KITS PART NUMBER	DESCRIPTION
RXJ	2" Back Pressure Vent to Non-Vent Conversion Kit
RXK	3" Back Pressure Vent to Non-Vent Conversion Kit
RXL	4" Back Pressure Vent to Non-Vent Conversion Kit
RXM	6" Back Pressure Vent to Non-Vent Conversion Kit
RXN	1" Back Pressure Vent to Non-Vent Conversion Kit

We have also created a video that walks customers through the conversion process step by step:
